

# Resource efficiency indicator development (Outotec, 2014-2015)

- Gaia and Outotec develop tools for measuring **resource efficiency** in the metallurgical industry
  - The indicators will be piloted in an evaluation of a copper production process. First results are expected to be ready for public release at the end of 2015.
- Based on the cooperation with Outotec, Gaia will also develop a new solution, **Gaia Refiner**
  - A practical tool for assessing and benchmarking the resource efficiency and environmental sustainability of different value chains.
