

Safer cities for tomorrow's world

- Since 2004, Gaia has worked with all relevant authorities and numerous companies to assess, visualize and reduce the potential risk from major accidents at plants, marshalling yards, ports and industrial plants at over a hundred sites.
- We use tools and state of the art calculations to bring all relevant factors relating to risk and vulnerability to the table: This means that our clients can focus on making the right decisions, without speculations.

Safer cities for tomorrow's world

- Currently we work with land use planners and the national authorities and relevant ministries to develop guidelines for creating more transparent and comparable decision making.
- Whenever you need to reflect on the spatial dimension of risk in relation to city planning or risk management plans, our extensive experience will help you do this effectively and rapidly.

Results from our projects have included devising new risk management plans, finding optimal locations and freeing up previously unused land for new development.

*Our Clients Make
the World Safer
and Cleaner.*
